# AVERAGE RATE OF CHANGE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

## DEFINITION 1

The *average rate of change* of a function  $f$  on an interval  $[a, b]$  is

$$\frac{f(b) - f(a)}{b - a} = \frac{f(a) - f(b)}{a - b}.$$

# AVERAGE RATE OF CHANGE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

#### DEFINITION 1

The *average rate of change* of a function  $f$  on an interval  $[a, b]$  is

$$\frac{f(b) - f(a)}{b - a} = \frac{f(a) - f(b)}{a - b}.$$

#### REMARK 1

This is just the difference quotient from the last section.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed?

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ .

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ . The average speed is:

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ . The average speed is:

$$\frac{104 - 0}{2 - 0}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ . The average speed is:

$$\frac{104 - 0}{2 - 0} = \frac{104}{2} .$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ . The average speed is:

$$\frac{104 - 0}{2 - 0} = \frac{104}{2} = 52 \text{ mph.}$$

## EXAMPLE

### RATES OF CHANGE

FARMAN

#### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

#### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

From Columbia, it's about 104 miles to Charleston. If you make the drive in two hours, what was your average speed? Take Columbia to be distance zero, and mark the starting time at  $t = 0$ . The average speed is:

$$\frac{104 - 0}{2 - 0} = \frac{104}{2} = 52 \text{ mph.}$$

### REMARK 2

Note that this does not necessarily imply you drove 52 mph the entire time, but rather you averaged 52 mph.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Find the average rate of change of  $f(x) = \sqrt{x}$  on  $[1, 4]$ .

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Find the average rate of change of  $f(x) = \sqrt{x}$  on  $[1, 4]$ .

$$\frac{f(4) - f(1)}{4 - 1}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Find the average rate of change of  $f(x) = \sqrt{x}$  on  $[1, 4]$ .

$$\frac{f(4) - f(1)}{4 - 1} = \frac{\sqrt{4} - \sqrt{1}}{4 - 1}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Find the average rate of change of  $f(x) = \sqrt{x}$  on  $[1, 4]$ .

$$\frac{f(4) - f(1)}{4 - 1} = \frac{\sqrt{4} - \sqrt{1}}{4 - 1} = \frac{2 - 1}{3}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Find the average rate of change of  $f(x) = \sqrt{x}$  on  $[1, 4]$ .

$$\frac{f(4) - f(1)}{4 - 1} = \frac{\sqrt{4} - \sqrt{1}}{4 - 1} = \frac{2 - 1}{3} = \frac{1}{3}.$$

# RELATIVE CHANGE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

Given a quantity,  $P$ , the *relative change* of the quantity from  $P$  to  $P'$  is

$$\frac{P' - P}{P}.$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

If gas costs \$2.25 and the price increases by \$2, then find the relative change in price.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

If gas costs \$2.25 and the price increases by \$2, then find the relative change in price.

$$\frac{4.25 - 2.25}{2.25}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

If gas costs \$2.25 and the price increases by \$2, then find the relative change in price.

$$\frac{4.25 - 2.25}{2.25} = \frac{2}{2.25}$$

# EXAMPLE

## RATES OF CHANGE

### FARMAN

#### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

#### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

If gas costs \$2.25 and the price increases by \$2, then find the relative change in price.

$$\frac{4.25 - 2.25}{2.25} = \frac{2}{2.25} = \frac{2}{\frac{9}{4}}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

If gas costs \$2.25 and the price increases by \$2, then find the relative change in price.

$$\frac{4.25 - 2.25}{2.25} = \frac{2}{2.25} = \frac{2}{\frac{9}{4}} = \frac{8}{9} = 0.\overline{8}.$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99. What is the relative change in the price?

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99. What is the relative change in the price?

$$\frac{52.99 - 75.99}{75.99}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99. What is the relative change in the price?

$$\frac{52.99 - 75.99}{75.99} = \frac{-23}{75.99}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99. What is the relative change in the price?

$$\frac{52.99 - 75.99}{75.99} = \frac{-23}{75.99} \approx -0.303.$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

A pair of jeans costs 75.99 normally. Today they are on sale for 52.99. What is the relative change in the price?

$$\frac{52.99 - 75.99}{75.99} = \frac{-23}{75.99} \approx -0.303.$$

Hence the price has been reduced by about 30%.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45. Find the relative change in weekly sales.

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45. Find the relative change in weekly sales.

$$\frac{45 - 25}{25}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45. Find the relative change in weekly sales.

$$\frac{45 - 25}{25} = \frac{20}{25}$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45. Find the relative change in weekly sales.

$$\frac{45 - 25}{25} = \frac{20}{25} = \frac{4}{5}.$$

# EXAMPLE

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

The number of sales per week for the jeans above is normally 25. During the week the jeans are on sale, the number of weekly sales increases to 45. Find the relative change in weekly sales.

$$\frac{45 - 25}{25} = \frac{20}{25} = \frac{4}{5}.$$

Hence weekly sales have increased by 80%.

# COST AND REVENUE

TIONS OF  
FUNCTIONS  
TO  
ECONOMICS

A company makes radios. To begin manufacturing radios, they spend \$24,000 on equipment and a factory. To manufacture a radio costs \$7 in material and labour. To manufacture  $q$  radios, the cost is:

$$C(q) = 7q + 24000.$$

- The \$24,000 expenditure is called a *fixed cost*.

# EXAMPLE

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICA-  
TIONS OF  
FUNCTIONS  
TO  
ECONOMICS

A company makes radios. To begin manufacturing radios, they spend \$24,000 on equipment and a factory. To manufacture a radio costs \$7 in material and labour. To manufacture  $q$  radios, the cost is:

$$C(q) = 7q + 24000.$$

- The \$24,000 expenditure is called a *fixed cost*.
- The \$7/radio in labour and material is called a *variable cost*.

# LINEAR MARGINAL COST

## RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

## DEFINITION 2

For a linear cost function, the marginal cost is the cost to produce one additional unit:

$$\frac{C(q+1) - C(q)}{(q+1) - q} = C(q+1) - C(q).$$

# LINEAR MARGINAL COST

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 2

For a linear cost function, the marginal cost is the cost to produce one additional unit:

$$\frac{C(q+1) - C(q)}{(q+1) - q} = C(q+1) - C(q).$$

### REMARK 3

This is just the slope of the linear cost function.

# PROFIT

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS  
OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 3

- Given a revenue and a cost function, the profit function is

$$\pi(q) = R(q) - C(q).$$

# PROFIT

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS  
OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 3

- Given a revenue and a cost function, the profit function is

$$\pi(q) = R(q) - C(q).$$

- The *break-even* point is the quantity,  $q$ , for which

$$\pi(q) = 0$$

holds.

# EXAMPLE

In the example above, assume that radios sell for 15 each.

RATES OF  
CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICA-  
TIONS OF  
FUNCTIONS  
TO  
ECONOMICS

# EXAMPLE

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICA-  
TIONS OF  
FUNCTIONS  
TO  
ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

## EXAMPLE

### RATES OF CHANGE

FARMAN

#### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

#### 1.4: APPLICATIONS OF FUNCTIONS TO ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

The profit function is

$$\pi(q) = R(q) - C(q)$$

## EXAMPLE

### RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

The profit function is

$$\pi(q) = R(q) - C(q) = 15q - (7q + 24000)$$

## EXAMPLE

RATES OF  
CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

The profit function is

$$\pi(q) = R(q) - C(q) = 15q - (7q + 24000) = 8q - 24000.$$

## EXAMPLE

### RATES OF CHANGE

FARMAN

### 1.3: AVERAGE RATE OF CHANGE AND RELATIVE CHANGE

### 1.4: APPLICA- TIONS OF FUNCTIONS TO ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

The profit function is

$$\pi(q) = R(q) - C(q) = 15q - (7q + 24000) = 8q - 24000.$$

The break-even point is value of  $q$  making

$$8q - 24000 = 0$$

hold.

## EXAMPLE

RATES OF  
CHANGE  
FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

In the example above, assume that radios sell for 15 each.  
The revenue function is

$$R(q) = 15q.$$

The profit function is

$$\pi(q) = R(q) - C(q) = 15q - (7q + 24000) = 8q - 24000.$$

The break-even point is value of  $q$  making

$$8q - 24000 = 0$$

hold. Therefore the break-even point is

$$q = \frac{24000}{8} = 3000.$$

# MARGINAL REVENUE

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 4

The *marginal revenue* for a linear revenue function is the revenue from selling one additional item,

$$\frac{R(q+1) - R(q)}{(q+1) - q} = R(q+1) - R(q).$$

# MARGINAL REVENUE

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 4

The *marginal revenue* for a linear revenue function is the revenue from selling one additional item,

$$\frac{R(q+1) - R(q)}{(q+1) - q} = R(q+1) - R(q).$$

### REMARK 4

This is just the slope of the revenue function.

# MARGINAL PROFIT

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 5

The *marginal profit* for linear cost and revenue functions is the profit from selling one additional item

$$\frac{\pi(q+1) - \pi(q)}{(q+1) - q} = \pi(q+1) - \pi(q).$$

# MARGINAL PROFIT

## RATES OF CHANGE

FARMAN

1.3: AVERAGE  
RATE OF  
CHANGE AND  
RELATIVE  
CHANGE

1.4: APPLICATIONS  
OF  
FUNCTIONS  
TO  
ECONOMICS

### DEFINITION 5

The *marginal profit* for linear cost and revenue functions is the profit from selling one additional item

$$\frac{\pi(q+1) - \pi(q)}{(q+1) - q} = \pi(q+1) - \pi(q).$$

### REMARK 5

This is the slope of the revenue function less the slope of the cost function.
